ROOT REVITALIZER PRO™ HOMEOWNER APPLICATION GUIDE

PART A — LIQUID CONCENTRATE

Bucket & Ground Spike Instructions

ROOT REVITALIZER PRO

ENGINEERED FOR TREE PLANTING SUCCESS.
DESIGNED FOR THE YEARS THAT FOLLOW

1 INSTALL THE SPIKE

Drive the ground spike into the soil along the tree's drip line.

2 POSITION THE BUCKET

Set the bucket securely on top of the spike.

3 MIX & FILL

Add 2–4 fl oz of concentrate per gallon of water and fill the bucket. The diluted mixture slowly drips into the soil in the feeder-root zone.

4 REFILL WITH WATER

After the bucket empties, remove it from the spike or leave it in place. Refill with water only 1–2 times per week. During drought, refill twice weekly.

Use only where soil can absorb water. Avoid saturated or frozen soil.

Results vary based on species, soil conditions, weather, watering, root damage, site history, and existing stress level.

PART B — CHARGED BIOCHAR ADD-ON

Separate Root-Zone Soil Amendment

ROOT REVITALIZER PRO

ENGINEERED FOR TREE PLANTING SUCCESS.
DESIGNED FOR THE YEARS THAT FOLLOW

1 CHECK THE BIOCHAR

Use the approved biochar product and site-specific amount. Confirm soil suitability and charged status before application.

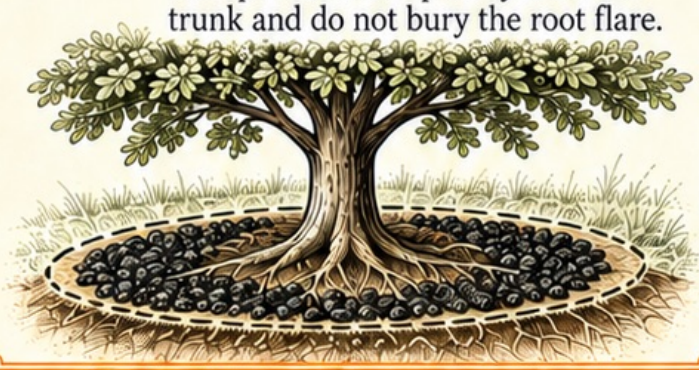

2 PREPARE SEPARATELY

If charging is needed, follow the approved charging protocol. Keep biochar separate from the liquid concentrate and bucket-and-spike system.

3 PLACE IN THE ROOT ZONE

Follow the site plan for placement under mulch or approved soil incorporation. Keep away from the trunk and do not bury the root flare.

4 COVER & MAINTAIN

Cover with mulch as directed. Continue appropriate watering and soil care. Avoid heavy piles; address compaction separately when needed.

Follow the approved protocol for charging, amount, treated area and incorporation depth.

Results vary based on species, soil conditions, weather, watering, root damage, site history, and existing stress level.

PART C — DRY BIOLOGICAL PACKET

Fresh-Added Biological Application

ROOT REVITALIZER PRO

ENGINEERED FOR TREE PLANTING SUCCESS.
DESIGNED FOR THE YEARS THAT FOLLOW

1 CHECK THE PRODUCT

Use the exact approved Part C product and rate. Confirm expiry and suitability for the tree. Keep dry until application.

2 PREPARE FOR APPLICATION

Follow the approved product directions.
If liquid mixing is specified, dilute Part A first, then add Part C immediately before use.
Do not add to the concentrate jug.

3 PLACE IN THE ROOT ZONE

Use the product's approved placement method to reach the active root zone.
Confirm bucket-and-spike compatibility before using that system.

4 USE PROMPTLY

If liquid mixing is approved, stir gently but thoroughly and apply promptly.
Keep shaded and out of extreme heat.
Do not store hydrated biological mixture.

Follow the approved product directions for the exact rate and application method.

Results vary based on species, soil conditions, weather, watering, root damage, site history, and existing stress level.
